**WASHTENAW COUNTY PUBLIC HEALTH OFFERS HALF-PRICED
RADON TEST KITS**

Residents Encouraged to Test Homes in Winter Months

ANN ARBOR, Michigan, January 10, 2013 – The Washtenaw County Public Health Department’s Environmental Health Division is observing January 2013 as National Radon Action Month. To promote this event, **Washtenaw County is offering half-priced radon home test kits through January 31, 2013.**

“Our goal is for every resident in Washtenaw County to test their home for radon, and to fix the problem if high levels are found,” says Angela Parsons, Environmental Health Education Coordinator with the Department. According to Parsons, “winter is the best time to test because homes are closed up tight, and people are spending more time indoors. This gives us the worst-case scenario, and the best indication of risk.”

Radon is a tasteless, colorless, and odorless radioactive gas. It is found in nearly all types of soil and rock. Radon can enter homes through cracks in the foundation, dirt floors, hollow-block walls, and openings around floor drains and sump pumps. Current estimates show that as many as 45% of homes in Washtenaw County have elevated levels of radon.

Radon is the leading cause of lung cancer for non-smokers in the United States. Research shows that radon is associated with 21,000 lung cancer deaths each year in this country. Fortunately, it’s a risk factor people can do something about, unlike genetics or family history.

Although no level of radon is considered absolutely safe, the Environmental Protection Agency (EPA) recommends taking action when levels are above 4.0 pCi/L inside a home. For comparison, the average indoor radon level is about 1.3 pCi/L, and the average outdoor level is about 0.4 pCi/L in the United States.

If a home is found to have elevated levels of radon, the radon can be reduced by installing a mitigation system. Depending on the home and contractor, a typical radon mitigation system costs \$800 - \$1000 in Washtenaw County.

According to Parsons, any home could have high levels of radon. “Your home could have radon even if you don’t have a basement, if you don’t have a sump pump, or if you have a walk-out basement with lots of windows and a door wall. Even if your neighbor’s house doesn’t have radon, you could still have high levels. The only way to know for sure is to test.”

Radon home test kits can be purchased for \$5.00 at the Western County Service Center between the hours of 8:30 a.m. – 5:00 p.m., Monday through Friday. Please note the office will be closed on Friday, January 18th and Monday, January 21st. The Service Center is located at 705 N. Zeeb Rd., just north of the I-94 interchange at Exit #169 in Scio Township.

To purchase a test kit by mail for an additional \$2.00, email parsonsa@ewashtenaw.org or call (734) 222-3869.

The radon test kits will remain available for purchase at the Western County Service Center after January 31st at the regular price of \$10.00.
